

PRESLEY

3 Years Old

Diagnosed with ATRT Brain Cancer at Age 5 Months

Presley underwent 4 brain surgeries, chemotherapy and 2 bone marrow transplants all before she was 1 years old. Today, she is not the same little baby laid in her hospital crib; she laughs, smiles and babbles and lights up a room.... Presley is cancer free!

She is still G-Tube fed and on numerous seizure medications, but she is here and has things to say and places to be. Presley does not know what “give up” is, she doesn’t comprehend “I can’t”, she just try’s and try’s until she gets it at her own pace.

“I believe there isn’t anything Presley can’t do if she wants to do it.” - Mom

She has something to tell the world. Just Wait!
