

# MATTHEW

4 Years Old

Diagnosed with with Stage 3  
Rhabdomyosarcoma Sarcoma at Age 2

Matthew, 4, was diagnosed with Stage 3 Rhabdomyosarcoma shortly after his 2nd birthday. Matthew had treatment at Phoenix Children's Hospital, and four months into his chemo regime he had surgery at Stanford Children's Hospital, where the tumor and 85% of his liver was removed. Matthew went into remission in February 2017 and is doing great.

Matthew doesn't know what he wants to be when he is older, he talks about so many different paths. We are blessed that Matthew can talk about the future, but until then, we ensure every day is filled with love and gratitude.
