

ELIANA

9 YEARS OLD

Langerhans Cell
Histiocytosis

I think the happiest moment in a cancer journey is having your child "ring the bell," which signifies that they no longer have active disease, and can come off of Chemotherapy. Eliana achieved that victory in September of 2021.

Unfortunately, her victory was short-lived as we were informed July 2022 that her Langerhans Cell Histiocytosis had returned. This time it was found in her right shoulder and hip socket along with her left collar bone, left forearm, and left shin. But Eliana is a CHAMP, and she has a strong community of family, friends, church, and school buddies to help her fight.

Treatment has started again.

Think about all the smiling faces you have helped while you run or walk!
