

GRAYSON

17 Years Old

Diagnosed with Ewing's
Sarcoma at age 12
In remission for 4 years

Grayson was diagnosed with Ewing's Sarcoma at the age of 12. Who would have known that this would change our lives forever? Grayson went thorough 9 months of chemo and 6 weeks of radiation. He would say that the main thing that affected him was the Neulasta shot which put him in pain for around 2-5 hours, otherwise; he was fine going through his cancer treatments. He likes Rubik's Cubes, extreme gaming, movies, video editing and Samsung devices. He would like to go to Japan because it is a unique place. He really enjoys virtual reality because you aren't just on a computer using a keyboard, you can move around in the real world.

Grayson has been in remission for 4 years.

Think about all the smiling faces you have helped while you run or walk!
