

YAMILET

4 Years Old

Diagnosed with Wilms
Tumor October 2017
At age 2

Yamilet is an amazing 4-year-old. In October 19, 2017 we were hit with hard news that she had a cancerous Wilms Tumor and would have to go through surgery. Yamilet had her tumor, right kidney, and appendix removed making sure all signs of cancer were gone. She had to go through 15 rounds of chemotherapy because she had some lymph nodes removed from her chest. With Yamilet only being 2 years old she really didn't understand what was happening to her. Every time we arrived to the hospital for her chemotherapy, she would say "Mommy I'm getting an owie", when it was time for them to access her port. After every chemotherapy, she would leave that hospital stronger than ever, being so little and not letting "Cancer" destroy her. I admire Yamilet for defeating cancer at such a young age and staying strong the whole time.

Our precious girl has shown us that if she could go through chemotherapy and defeat cancer, she can accomplish anything that she wants in this world.

Think about all the smiling faces you have helped while you run or walk!
